ColourPane

PSU

Remote RGB controller

Discuss your requirements

An RGB controller is required for colour changing version but only a power supply for single colour types.

If you have a custom requirement or other enquiry please call our Technical Department for advice on 08456 434740

Applications

- Restaurants
- Bars
- Night Clubs
- Reception areas
- Conferences
- Meeting rooms
- Sports halls
- Shops

Description

ColourPane is a special acrylic panel designed to be either suspended or fitted flat to a wall or ceiling. They are available as single colour or colour changing (RGB). The effect is a colour wash across the panel. With a colour controller the rate can be adjusted or individual colours selected. The wash of colour across the surface of the panel can be adjusted from gentle to rapid depending upon your needs.

A suspended ColourPane will have the effect visible on up to 3 edges and both faces. They are most effective when several are installed together and the colour washes over each panel simultaneously.

ColourPanes are made with a white plastic frame designed to be as unobtrusive as possible.

Features

Bright
Low power
Low voltage

Benefits

Eye catching
Economical to operate
Safe

Specifications

Panel	Acrylic
Illumination	RGB LED
Power supply	240V
